PROFESSIONAL SUMMARY

SQL-oriented Data Analyst with over 3 years across insurance, e-commerce, and academic data environments. Delivered reporting systems that cut post-release dashboard defects by 30%, reduced reporting errors by 90%, and automated 30% of manual reporting work. Skilled in SQL, Power BI, Tableau, Python, Snowflake, and MicroStrategy, with a strong focus on data validation, reconciliation, and stakeholder-ready reporting.

TECHNICAL SKILLS

Programming & Querying: Advanced SQL, Python, R

Business Intelligence & Visualization: Power BI, Tableau, MicroStrategy, Excel, Dashboard Development, Data Storytelling

Databases & Data Warehousing: SQL Server, PostgreSQL, MySQL, Vertica, Snowflake, MongoDB, Star Schema, Dimensional Modeling

Data Analysis: Data Cleaning, Exploratory Data Analysis (EDA), KPI Analysis, Root-Cause Analysis, A/B Testing, Hypothesis Testing, Business Reporting, Data Pipeline Validation

SQL & Query Development: Joins, CTEs, Window Functions, Subqueries, Aggregations, CASE Statements, Date Functions, Data Filtering, Data Reconciliation, Query Validation

Cloud & Analytics Platforms: AWS, Google Cloud Platform (GCP), Amazon S3, Google BigQuery, Google Cloud Storage, Cloud Data Warehousing Basics

Analytics Tools: DBeaver, JIRA, Confluence, VS Code, Git/GitHub

Statistical & Predictive Analytics: Descriptive & Inferential Statistics, Regression, Correlation Analysis, Predictive Modeling, Model Evaluation

EXPERIENCE

Research Data Analyst

Aug 2024 - Present

Texas A&M University

Corpus Christi, Texas

- Cleaned and validated enrollment, survey, and research datasets across Snowflake and BigQuery using SQL and Python reducing data errors in institutional reports used for university planning and grant submissions.
- Built and maintained Tableau dashboards and Excel reporting models using SQL CTEs, window functions, and reconciliation checks enabling leadership and faculty to track program performance, enrollment trends, and departmental metrics without manual data pulls.
- Maintained research data infrastructure by building and updating data dictionaries, standardizing metadata, and organizing datasets across cloud and relational environments improving long-term accessibility and reuse readiness for institutional and grant reporting.
- Built a library of reusable SQL validation queries and Excel reconciliation trackers to catch data gaps, transformation errors, and source-to-report mismatches replacing ad hoc manual checks with a repeatable, scalable validation workflow.

Data Analyst

Apr 2023 - Aug 2024

Mass Mutual

Hyderabad, India

- Queried and analyzed insurance reporting datasets using SQL and MicroStrategy to validate KPIs, enforce business rules, and ensure dashboard accuracy for stakeholder reporting across enterprise reporting systems.
- Designed and executed source-to-target reconciliation checks across enterprise insurance datasets validating record counts, field transformations, duplicates, and calculation logic expanding validation coverage by 20%.
- Validated MicroStrategy dashboard KPIs, filters, calculations, aggregations, and drill-down logic to ensure reporting accuracy and consistency, contributing to a 30% reduction in post-release reporting defects.
- Investigated source-to-dashboard mismatches to identify root causes, then documented defect details, business impact, and resolution status in JIRA and Confluence improving cross-team communication between QA, engineering, and business stakeholders.

- Analyzed customer behavior, sales, campaign, and product interaction datasets using SQL, PostgreSQL, Python, and Excel to support e-commerce reporting, business performance tracking, and stakeholder decision-making.
- Developed Power BI dashboards and Excel reports to track sales trends, customer engagement, product performance, campaign performance, revenue patterns, and retention indicators, reducing manual reporting effort.
- Queried, cleaned, and unified customer, transaction, product, and campaign datasets from multiple sources to improve reporting consistency and prepare analysis-ready datasets for recurring business reports.
- Created stakeholder-ready reports and visual summaries for product, sales, and marketing teams, improving turnaround time for routine analysis requests by 20%.
- Automated recurring data extraction, cleaning, and reporting tasks using SQL and Python, standardizing reporting workflows and reducing repetitive manual analysis work by 30%.

PROJECTS

Retail Sales Performance Analytics & OLAP Reporting

- Converted raw retail sales data into analysis-ready datasets and defined business KPIs including revenue, product demand, regional contribution, monthly growth, category performance, and average order value.
- Built a star-schema reporting structure using sales fact tables and product, region, and time dimensions to support OLAP analysis, drill-down reporting, and KPI tracking.
- Developed business-ready insights to identify high-performing products, underperforming regions, seasonal sales patterns, and revenue improvement opportunities for sales and inventory planning.

ETL Data Quality Validation & Reporting Accuracy Framework

- Developed SQL-based data quality rules to validate completeness, uniqueness, consistency, referential integrity, data type accuracy, and business-rule compliance before reporting.
- Built source-to-target reconciliation queries to compare record counts, missing values, duplicate records, transformation outputs, and metric-level differences between raw and reporting datasets.
- Designed a Power BI data quality scorecard to monitor validation failures, reporting issues, duplicate records, missing values, and data accuracy trends over time.

Executive Sales Dashboard & KPI Reporting

- Designed an executive-level sales dashboard to track revenue, profit margin, average order value, monthly growth, product category performance, and regional sales performance.
- Used SQL and Power Query to clean, transform, and model sales data into dashboard-ready reporting tables for accurate KPI tracking and business analysis.
- Developed DAX measures for total revenue, profit margin, average order value, month-over-month growth, category contribution, and regional performance comparison.

EDUCATION

Master of Science in Data Science, Texas A&M University – Corpus Christi

Aug 2024 – May 2026

Notable Courses: Data Analysis, Database Management, Machine Learning, Statistical Modeling, Data Visualization, Big Data Analytics

Bachelor of Science in Mathematics, Statistics and Computer Science – KU Warangal

2019 - 2022

Notable Courses: Python Programming, Statistics, Mathematics, Programming, Database Systems, Probability, Data Structures

CERTIFICATIONS& TRAINING

The Complete SQL Certification Course

Practical training in SQL querying, joins, subqueries, and relational database concepts.

Data Analytics Certification Course

Hands-on training in data cleaning, exploratory data analysis, visualization, and statistical analysis using real datasets.

Microsoft Certified: Data Analyst Associate with Power BI

Developed skills in Power BI data modeling, Power Query data transformation, DAX calculations, report design and interactive dashboard development.

Youth Data Analytics Skilling Program

Industry-oriented training focused on foundational data analytics skills and applied problem-solving.
